PostalOne!®

Release 37.0.2 – Version 1

The *PostalOne!* system Release *37.0.2 (February 6, 2014)* is deployed to introduce software fixes to the system. This includes a correction to issues previously identified in a prior release.

These Release Notes provide the contents of the release and affected subsystems.

1. USPS

PostalOne! Release *37.0.2* will be deployed to introduce software fixes to the system. This includes corrections to issues previously identified from a previous release.

1.1.   Mail.dat

The following item impacts mailers submitting postage statements using Mail.dat.

This impacts all users submitting postage statements using electronic data exchange methods. Periodical postage statements now accurately display the number of copies on line C34 (Carrier Route High-Density pieces) the same as they are displayed on the Qualification Report. Previously, a defect introduced in the January 2014 release caused the number of copies on line C34 to consistently display as zero for Periodicals postage statements submitted by Mail.dat or Mail.XML with Carrier Route High-Density pieces, even though the actual number of copies was non-zero. The correct number of copies continued to display on the Qualification Report. 6761-A

This affects all users submitting postage statements through Mail.dat. Postage statements submitted by Mail.dat now successfully complete post-finalization processing. Prior to this release, under certain scenarios, some jobs incorrectly encountered the internal error "ORA-00001: unique constraint violated" during the post-finalization process. 6741-A

1.2.   Mail.XML

The following items impacts mailers submitting postage statements using Mail.XML.

This impacts all users submitting postage statements using electronic data exchange methods. Periodical postage statements now accurately display the number of copies on line C34 (Carrier Route High-Density pieces) the same as they are displayed on the Qualification Report. Previously, a defect introduced in the January 2014 release caused the number of copies on line C34 to consistently display as zero for Periodicals postage statements submitted by Mail.dat or Mail.XML with Carrier Route High-Density pieces, even though the actual number of copies was non-zero. The correct number of copies continued to display on the Qualification Report. 6761-A

Mail.XML processing has been updated to correctly indicate the existence of a container in the response message to a Container Status Query. Prior to this release, the Container Status Query Response message incorrectly responded with no container found, even though the container existed. 6760-A

Mail.XML postage statement processing has been updated to correctly populate the Advertising Pounds, Subscriber Copies, and Postage for Periodicals postage statements (PS 3541). Previously, a defect introduced in the January 2014 release erroneously failed to account for new zones and scenarios introduced in that release. This resulted in the Advertising Pounds (line B18, Zone Z) and Subscriber Copies (line B12, Zone 9) being incorrectly populated with zeroes for Periodicals postage statements submitted by Mail.XML. In addition, postage calculation incorrectly used advertising pounds instead of non-advertising pounds in the calculation of postage for line B16, Zone S. 6762-A

Mail.XML validation processing has been updated to correctly handle First Class Mail postage statement submissions (Postage Statement Create Request messages) with a Single Piece Rate Category. Previously, a defect introduced in the January 2014 release incorrectly triggered error 9636 for First Class Mail postage statement submissions that had a Rate Category of "S" (Single Piece) and a Single Piece Weight of exactly 2 oz. In addition, the error was also incorrectly thrown for First Class Mail postage statement submissions with more than one Line Item Data Block having a Single Piece Rate Category. Error 9636 is "The RateCategory provided was {1}. When claiming a RateCategory of S = Single Piece for First Class Residual pieces, you must include Automation or Presort pieces." As a workaround, the Postage Statement Create Request message could be submitted with only a single Postage Statement Line Item Data Block having a Rate Category of "S". 6783-A

1.3. Electronic Verification System (eVS®)

The automated process that reconciles eVS manifest data to unmanifested pieces has been updated to correctly handle the full volume of unmanifested records for reconciliation. Prior to this release, a defect resulted in only the first 1000 unmanifested records successfully completing the reconciliation process. In addition, this caused an abnormally high number of unmanifested records to display on the mailers eVS billing page. 6739-A

1.4. Microstrategy Reports

This impacts users with access to Microstrategy Reports. The Microstrategy Mailer Scorecard report has been updated so that the report name no longer contains a "(1)" at the end. In addition, the Seamless Sampling by eDoc Submitter report has been updated to remove the "(1)" which was incorrectly displayed on the end of the Number of Containers Sampled column on the report. 6368-A

1.5. Scan Based Payment

Manifest processing of 1 lb. First Class Mail packages now completes successfully. Previously, a logic defect introduced in the January 2014 release resulted in the failure of the rate lookup of First Class Mail packages weighing 1 lb. to 5 lbs., which incorrectly caused the manifest processing of the packages to fail. 6537-A

1.6. Periodicals

This impacts users submitting postage statements for Nonprofit, Classroom, Limited Circulation, and Limited Circulation Science of Agriculture Periodicals. The Non-advertising Percentage on line C38 is now correctly considered during calculation of the 5% discount for Nonprofit, Classroom, Limited Circulation, and Limited Circulation Science of Agriculture Periodicals. Prior to this release, a defect erroneously ignored the Non-advertising Percentage on line C38 during calculation of the 5% discount for these Periodicals. 6744-A

1.7. Postage Statements

First Class Mail Round Trip DVD/CD flats less than 2 oz. are now receiving the 1 oz. letter rate. Previously, the rates for lines D7 - D10 were not being reduced to the 1 oz. letter rate when the weight was less than 2 oz.

1.8. Postal Wizard

The PS 3605, lines A46-A74 for Bound Printed Matter Flats, now displays when Full-Service is selected. Previously, when Full-Service was not selected, but Barcode type of Imb was selected along with Barcoded and Non-Barcoded lines A46-A74 displayed without the Full-Service discount line.
